

Learning Mobility with Non-Industrialised Countries

LEMONOC

LEMONOC's main objective is to improve the quality of learning mobility with non-industrialized or economically developing countries within European higher education institutions (HEIs). The project provides tools and resources and facilitates a stronger cooperation among HEIs to share knowledge and good practices.

Outputs

There is an increasing number of diverse exchange opportunities in higher education institutions with varying goals and objectives. This involves a need to develop a more structural, qualitative and joint approach in organizing such transnational exchange programmes. LEMONOC will strengthen the capacity of HEIs to organize learning mobility with non-industrialized countries by:

- Collecting, analysing and systematising data
- Sharing knowledge and expertise with different stakeholders
- Providing a dynamic, interactive e-platform
- Developing an online self-assessment tool for HEIs
- Providing validated good practices and structured resources in an e-library
- Developing training courses for trainers and staff of international mobility services
- Ensuring the further development of the outcomes online and at an international seminar

Focus

LEMONOC focuses on five thematic areas:

- Initiating or establishing partnerships
- Recruitment
- Pre-departure support
- In-country support
- Support on return

Partners

What makes LEMONOC particularly innovative is the composition of its consortium partners and its *regard croisé* in international mobility by integrating perspectives from the North and from the South. While the Northern partners will look at the conditions for sending out students, the Southern partners will assess the capacity needed in order to receive students from abroad. The results will then translate into quality improvement and can be applied to sending or receiving higher education institutions worldwide.

Consortium Partners:

African Network for
Internationalization
of Education (ANIE)

HAMK
UNIVERSITY OF APPLIED SCIENCES

Supported by the Lifelong Learning Programme
of the European Commission
